FLIR ThermaCAM B360 320x240

FLIR BCAMSD 120x120

YOU CAN'T **FIX** THE PROBLEMS,

UNTIL YOU CAN **SEE** THE PROBLEMS!

As an energy professional, you're in demand! The world is depending on **YOU** to show them ways to save even more energy (and more money!) than ever before. Consumers are relying only upon professionals with the best means of accurate energy analysis: infrared imaging.

You gain a competitive edge by using an infrared camera to instantly see and diagnose energy loss, via a non-destructive method. Complete a comprehensive home energy audit, heat loss analysis, or quality assurance of insulation in older homes, without invasive measures! Easily detect missing insulation in walls and ceilings, air leakage around doors, windows, and along foundations. Incorporating infrared into your inspections means that you are developing an **ACCURATE** insulation and air-sealing strategy to address your client's problems. Infrared cameras take the guess work out of locating air infiltration!

Infrared cameras are also an invaluable tool when checking the quality of insulation installations and air-sealing in **NEW** homes. More building professionals are relying on infrared cameras to ensure that their new homes meet **ENERGY STAR™** ratings. Using infrared cameras for quality assurance checks of insulation and air infiltration ensures building professionals that they are always meeting consumer demands for energy efficient homes!

If you've been considering investing in a thermal imager, don't wait another day! Whether your application needs are for 120x120, 160x120, 320x240, or 640x480 resolution, you'll find a wide selection of imagers at Monroe Infrared, and you can rely on Monroe Infrared Technology's twenty-three years of industry experience to match you with the right infrared camera for your application. Our goal is providing you with the right infrared camera and training, so that you're always achieving the best results possible!
